| Module 4: Expressions and One-Step Equations <br> Topic E: Relating Variables by Using Tables, Graphs and Equations |  |  |  |  |  |
|  | Monday Feb. 26th | Tuesday Feb 27th | Wednesday Feb 28th | Thursday Feb 29th | Friday March 1st |
| Lesson | Lesson 22: Relationship Between Two Variables | Lesson 23: Graphs of Ratio Relationships | Module 4 Test | M5 Lesson 1: The Area of a Parallelogram | Lesson 2: The Area of a Right Triangle |
| Pages | 0 | 0 | 0 | 0 | 0 |
| We will... | represent a ratio relationship with a table an a twovariable equation | analyze the relationship between the independent and dependent variables in the graph of a ratio relationship | 0 | we will compose and decompose polygons to find their areas | we will use what we know about the area of a rectangle to find the area of a right triangle |
| Bell Ringer | real world algebraic expressions | graph of a ratio relationship | 0 | determine the area of rectangles | classify triangles |
| Exit Ticket | write an equation to represent a ratio relationship | write an equation and define the variables | 0 | find the area of a parallelogram | find the area of a right triangle |
| I will... | explain the difference between independent and dependent variables in a situation | explain where we can find the value of the ratio in each representation of a ratio relationship | 0 | explain how knowing how to find the area of a rectangle helps us find the area of a parallelogram | Pro |
| State <br> Standards | 6.EE.B.5 Understand solving an equation or inequality as a process of answering a question: which values from a specified set, if any, make the equation or inequality true? Use substitution to determine whether a given number in a specified set makes an equation or inequality true. |  |  |  |  |
|  | 6.EE.B. 6 Use variables to represent numbers and write expressions when solving a real-world or mathematical problem; understand that a variable can represent an unknown number, or, depending on the purpose at hand, any number in a specified set. |  |  |  |  |
|  | 6.EE.B. 7 Solve real-world and mathematical problems by writing and solving equations and inequalities of the form $\mathrm{x}+\mathrm{p}=\mathrm{q}$ and $\mathrm{px}=\mathrm{q}$ for cases in which $\mathrm{p}, \mathrm{q}$ and x are all nonnegative rational numbers. Inequalities will include,$\leq$, and $\geq$. |  |  |  |  |
|  | 6.EE.B. 8 Write an inequality of the form $\mathrm{x}>\mathrm{c}$ or $\mathrm{x}<\mathrm{c}$ to represent a constraint or condition in a real-world or mathematical problem. Recognize that inequalities of the form $\mathrm{x}>\mathrm{c}$ or $\mathrm{x}<\mathrm{c}$ have infinitely many solutions; represent solutions of such inequalities on number line diagrams. |  |  |  |  |
