| Mrs. Logan Advanced Math Week 27: March 4-8 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Module 4: Graphs of Linear Equations and Systems of Linear Equations Topic A: Graphs of Linear Equations in Two Variables |  |  |  |  |  |
|  | Monday March 4th | Tuesday March 5th | Wednesday March 6th | Thursday March 7th | Friday March 8th |
| Lesson | Expressions, Equations and Inequalities Review | Expressions, Equations and Inequalities Review | Lesson 1: Solutions to Linear Equations in Two Variables | Lesson 2: The Graph of a Linear Equation in Two Variables | Lesson 3: Lines with Special Characteristics |
| Pages |  |  | 7-23 | 25-41 | 43-56 |
| We will... | extend work with rational numbers to simplify expressions and solve equations and inequalities. | extend work with rational numbers to simplify expressions and solve equations and inequalities. | represent situations with equations and learn to find solutions to those equations. | discover the shape of the graph of a linear equation by finding solutions to the equation and then graphing them on the coordinate plane. | learn about special characterisitics of the graphs of equations such as $0 x+y=5$ and $x+0 y$ $=2$. |
| Bell Ringer | Assessment Prep | Assessment Prep | Scoring 32 | Curved Line | Types of Lines |
| Exit Ticket | Assessment Feedback | Assessment Feedback | Solution? | Satisfy the Equation | Graphing Equations |
| I will... | write expressions, equations and inequalities and solve them in real world scenarios. | write expressions, equations and inequalities and solve them in real world scenarios. | find solutions to linear equations in two variables and graph the solutions in the coordinate plane. | identify that the graph of a linear equation in the form $A x+B y=C$ is a line | graph linear equations of the form $A x+B y=C$ and $\mathrm{By}=\mathrm{C}$ where A and $B$ are nonzero. |
| Reminders |  | Intro to Module 4:Graphs of Linear Equations and Systems of Equations | Digital Lesson |  |  |
| State <br> Standards | 8.EE.BUnderstand the connections between proportional relationships, lines, and linear equations. |  |  |  |  |
|  | 8.EE.B.5Graph proportional relationships, interpreting the unit rate as the slope of the graph. Compare two different proportional relationships represented in different ways. |  |  |  |  |
|  | 8.EE.B.6Use similar triangles to explain why the slope $m$ is the same between any two distinct points on a non-vertical line in the coordinate plane; derive the equation $\mathrm{y}=\mathrm{mx}$ for a line through the origin and the equation $\mathrm{y}=\mathrm{mx}+\mathrm{b}$ for a line intercepting the vertical axis at b . |  |  |  |  |
|  | 8.EE.C.8.aUnderstand that solutions to a system of two linear equations in two variables correspond to points of intersection of their graphs, because points of intersection satisfy both equations simultaneously. |  |  |  |  |

> | 8.EE.C.8.bSolve systems of two linear equations in two variables algebraically, and estimate solutions by |
| :--- |
| graphing the equations. Solve simple cases by inspection |
| 8.EE.C.8.cSolve real-world and mathematical problems leading to two linear equations in two variables. |
