| Mrs. Logan Advanced Math Week 12: October 30-November 3 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Module 3: Two-Dimensional Geometry Topic A: Triangles and Circles <br> Topic B: Rigid Motions and Congruence |  |  |  |  |  |
|  | Monday October 30th | Tuesday October 31st | Wednesday November 1st | Thursday November 2nd | Friday <br> November 3rd |
| Lesson | Module 3 Topic A Quiz | Lesson 7: Motions of the Plane | Lesson 8: <br> Translations, Reflections and Rotations | Lesson 9: Rigid Motions on the Coordinate Plane | Lesson 10: Sequencing the Rigid Motions |
| Pages | 5-95 | 99-114 | 115-134 | 135-155 | 157-171 |
| We will... | explore twodimensional figures with an emphasis on triangles and circles. | use a transparency to help us model certain motions and describe the motions and their properties mathematically. | apply and precisely describe rigid motions. | use the coordinate plane as a tool to help us describe translations, reflections and rotations. | apply and describe sequences of rigid motions. |
| Bell Ringer | Quiz Prep | Repeated Shapes | Precise Language | Precise Translation? | Single Rigid Motion |
| Exit Ticket | Quiz Feedback | Identifying Rigid Motions | Draw and Label Rigid Motions | Graph and Label | Draw, Label and Describe |
| I will... | understand the conditions for a triangle and calculate area and circumference of circular figures. | informally describe how to map a figure to its image and demonstrate that the distance between two points stays the same under rigid motions. | apply translations, reflections and rotations to the plane and identify the basic properties of the rigid motions. | apply translations, refelctions and rotations on the coordinate plane and use coordinates to describe the location of an image under a translation, reflection or rotation. | apply and describe sequences of rigid motions and determine that the properties of individual rigid motions also apply for a sequence of rigid motions. |
| Reminders |  |  |  |  | Apply Rigid Motions worksheet for a grade. |
| State <br> Standards | 7.G.A.2. Draw (freehand, with ruler and protractor, or with technology) geometric shapes with given conditions. |  |  |  |  |
|  | 7.G.B.4. Know the formulas for the area and circumference of a circle and solve problems; give an informal derivation of the relationship between the circumference and area of a circle. |  |  |  |  |
|  | 8.G.A. 1 Verify experimentally the properties of rotations, reflections and translations. |  |  |  |  |
|  | 8.G.A.1.a. Lines are taken to lines, and line segments of the same length. |  |  |  |  |
|  | 8.G.A.1.b. Angles are taken to angles of the same measure. |  |  |  |  |
|  | 8.G.A.1.c. Parallel lines are taken to parallel lines. |  |  |  |  |
|  | 8.G.A.2. Explain that a two-dimensional figure is congruent to another if the second can be obtained from the first by a sequence of rotations, reflections and translations; given two congruet figures, describe a sequence that exhibits the congruence between them. |  |  |  |  |
|  | 8.G.A.3. Describe the effect of dilations, translations, rotations, and reflections on two-dimensional figures using coordinates. |  |  |  |  |
