Solve.

1. An office space in New York City measures 48 feet by 56 feet. If it sells for $565 per square foot, what is the total cost of the office space?

   \[ 48 \times 56 = 2,688 \text{ sq. ft.} \]
   \[ \frac{2,688}{28} = 95.28 \]
   \[ \frac{2,688}{20} = 134.4 \]
   \[ \frac{2,688}{200} = 13.44 \]
   \[ \frac{2,688}{2,000} = 1.344 \]
   \[ \frac{2,688}{1,000} = 2.688 \]
   \[ \frac{2,688}{100} = 26.88 \]
   \[ \frac{2,688}{1,000} = 2.688 \]

   \[ \text{It will sell for } $1,518,720. \]

2. Gemma and Leah are both jewelry makers. Gemma made 106 beaded necklaces. Leah made 39 more necklaces than Gemma.
   a. Each necklace they make has exactly 104 beads on it. How many beads did both girls use altogether while making their necklaces?

   \[ \text{Gemma: } 106 \times 104 = 10,944 \]
   \[ \text{Leah: } 145 \times 104 = 15,020 \]
   \[ \text{Together: } 10,944 + 15,020 = 25,964 \]

   They used 25,964 beads altogether.

b. At a recent craft fair, Gemma sold each of her necklaces for $14. Leah sold each of her necklaces for 10 dollars more. Who made more money at the craft fair? How much more?

   \[ \text{Gemma: } 10 \times 14 = 140 \]
   \[ \text{Leah: } 145 \times 24 = 3,480 \]

   Leah made more money. She made $2,340 more.

3. Peng bought 26 treadmills for her new fitness center at $1,334 each. Then, she bought 19 stationary bikes for $749 each. How much did she spend on her new equipment? Write an expression, and then solve.

   \[ \text{Equipment: } 26 \times 1,334 = 34,684 \]
   \[ 19 \times 749 = 14,131 \]

   \[ (1,334 \times 26) + (749 \times 19) = 48,915 \]

   They spent $48,915 on equipment.
4. A Hudson Valley farmer has 26 employees. He pays each employee $410 per week. After paying his workers for one week, the farmer has $162 left in his bank account. How much money did he have at first?

\[
\begin{align*}
$410 & \quad \text{employees} \\
26 & \quad \text{left} \\
\frac{410 \times 26}{2460} & \quad \text{in his account} \\
+ & \quad \text{at first.}
\end{align*}
\]

5. Frances is sewing a border around 2 rectangular tablecloths that each measure 9 feet long by 6 feet wide. If it takes her 3 minutes to sew on 1 inch of border, how many minutes will it take her to complete her sewing project? Write an expression, and then solve.

\[
\begin{align*}
x & \quad \text{in.} \\
12 & \quad \text{in.} \\
\frac{12 \times \frac{9}{12}}{12} & \quad \text{in.}
\end{align*}
\]

6. Each grade level at Hooperville Schools has 298 students.
   a. If there are 13 grade levels, how many students attend Hooperville Schools?

\[
\begin{align*}
298 & \quad \text{grade levels} \\
\frac{298 \times 13}{3974} & \quad \text{students}.
\end{align*}
\]
   b. A nearby district, Willington, is much larger. They have 12 times as many students. How many students attend schools in Willington?

\[
\begin{align*}
\frac{3874 \times 12}{46488} & \quad \text{students.}
\end{align*}
\]
